## BITTERMAN RESIDENCE

This residential metal roofing is exactly what was needed after the original shake shingles sustained significant storm damage. The owner of an upscale residence in Orlando, FL wanted a new metal roof installed that would be “the last roof we put on this house.” Approximately 12,000 sq. ft. of Petersen SNAP-CLAD™ metal roofing panels were installed to meet the owner’s objective.

The SNAP-CLAD residential metal roofing system has been designed for architectural aesthetics and structural performance and meets Florida’s Building Code and Miami-Dade NOA standards for wind-uplift resistance.

The 16” wide, 24 gauge Galvalume steel panels were finished in Copper Penny. Approximately 4,000 sq. ft. of PAC-CLAD metal roofing flat stock was used for flashings and gutters on the project.

Installation of the Petersen panels was done by RAE CO of Ocala, Ocala, FL.

Petersen manufactures PAC-CLAD metal cladding products in multiple gauges of steel and aluminum. PAC-CLAD products include standing-seam roof panels, hidden- and exposed-fastener wall panels, flush panels, soffit panels, perforated metal, fascia and coping systems, composite panels, column covers, coil and flat sheet. All are available in full 70% PVDF finish (Kynar) in 46 standard colors that include a 30-year finish warranty. Most colors meet LEED, Energy Star and Cool Roof Rating Council certification requirements. Founded in 1965, Petersen’s facilities are located in Illinois, Georgia, Texas, Maryland, Minnesota and Arizona.

For information on the complete line of Petersen metal products call 800-PAC-CLAD, visit [pac-clad.com](http://pac-clad.com) or
