MARCO ISLAND

Metal roof offers island home protection from sun and storms

Marco Island, Fla., offers a tropical climate, a gorgeous coastline and picture-postcard sunsets, among many other treats for the senses. However, this barrier island located off the coast of Naples, Fla., also can find itself in the crosshairs of approaching hurricanes. That was certainly the case on Sept. 11, 2017, when Hurricane Irma made landfall there, with wind speeds of 130 mph. With hazards like Irma always a possibility, residents have learned to pay attention to their roofing materials.

One private residence located directly on Robins Bay features a PAC-CLAD roof from Petersen designed to stand up to such storms. Local firm Moore Roofing Co. installed 10,000 sq. ft. of Snap-Clad .032-gauge panels featuring a Cityscape finish on the home. The standing-seam panels feature a continuous interlock to ensure weather tightness. Plus, a 30-year, non-prorated warranty ensures finishes are guaranteed not to fade, even with ongoing exposure to sun and salt air.

Petersen manufactures PAC-CLAD metal cladding products in multiple gauges of steel and aluminum. PAC-CLAD products include standing-seam roof panels, hidden- and exposed-fastener wall panels, flush panels, soffit panels, perforated metal, fascia and coping systems, composite panels, column covers, coil and flat sheet. All are available in full 70% PVDF finish (Kynar) in 46 standard colors that include a 30-year finish warranty. Most colors meet LEED, Energy Star and Cool Roof Rating Council certification requirements. Founded in 1965, Petersen's facilities are located in Illinois, Georgia, Texas, Maryland, Minnesota and Arizona.

For information on the complete line of Petersen metal products call 800-PAC-CLAD, visit pac-clad.com or
