
Minimum Roof Slope Requirements for Installation of PAC-CLAD HT Products

This Technical Bulletin provides guidance for best practices of roof slope design where PAC-CLAD HT is installed.

As best practice, PAC-CLAD HT is recommended for any normal steep-slope roof system. However, this underlayment should not be used in a zero-slope or "flat" roof. PAC-CLAD HT is recommended in applications having a minimum ½:12 pitch. Refer to the technical data sheet for specific underlayment limitations and installation guidelines.
